Ginninderra Waterwatch
Communities Caring
For Catchments

Ginninderra Catchment Group

Some Conditions for Monitoring

Monitoring should be done within 2-3 days of the designated sampling dates. If for any reason you are unable to sample on a particular date, it is important that you contact the Waterwatch Coordinator, so that alternative arrangements for sampling can be made. This will ensure the continuity of our data.

After monitoring, please enter your data online: http://waterwatch.ginninderralandcare.org.au/ (or follow links on GCG Website)

If you do not have access to the Internet data sheets can be:

Posted to: PO Box 446, Holt, ACT, 2615

Dropped to our office: Kippax Health Centre building, Kippax Place, Holt (if we are not in the office, you can just leave it under the door.)

or Faxed to: 6278 3926.

Please ensure that you calibrate your pH and EC meters each time you do your sampling. This will ensure that our results are accurate.

Be sure to make a note on your field data sheet or contact the Waterwatch Coordinator if any of the equipment appears to be faulty or in need of some maintenance.

The monitoring equipment provided remains the property of the Ginninderra Catchment Group. If you are unable to continue your participation in the program, it is important that all equipment is returned to the Group. We cannot afford to have equipment that is not being used.

I agree to the conditions set out above, and I understand that the Waterwatch Kit remains the property of the Ginninderra Catchment Group. I agree to return the Waterwatch Kit to the Waterwatch Coordinator in the event I can no longer perform my monthly monitoring duties. I have read the safety considerations sheet and completed a training session.
