

# Some Reminders for Monitoring

- Monitoring should be done within 2-3 days of the designated sampling dates. If for any reason you are unable to sample on a particular date, it is important that you contact the Waterwatch Coordinator, so that alternative arrangements for sampling can be made. This will ensure the continuity of our data.
- After monitoring, return your completed field data sheet to the Waterwatch Coordinator as soon as possible. Data sheets can be:
  - ➔ Emailed to: [waterwatch@ginninderralandcare.org.au](mailto:waterwatch@ginninderralandcare.org.au)
  - ➔ Posted to: PO Box 446, Holt, ACT, 2615
  - ➔ Dropped to our office: Kippax Health Centre building, Kippax Place, Holt (if we are not in the office, you can just leave it under the door.)
  - ➔ or Faxed to: 6278 3926.
- Please ensure that you calibrate your pH and EC meters each time you do your sampling. This will ensure that our results are accurate.
- Be sure to make a note on your field data sheet or contact the Waterwatch Coordinator if any of the equipment appears to be faulty or in need of some maintenance.
- The monitoring equipment provided remains the property of the Ginninderra Catchment Group. If you are unable to continue your participation in the program, it is important that all equipment is returned to the Group. We cannot afford to have equipment that is not being used.
